

DApps/services built by [Optimus Inu](#) purchasable for your project through [t.me/op_lab](#)

There is always something new being developed in the lab. The Optimus Inu team is patron to many gifted developers that create outstanding applications for the project. In order to help other projects reach their full potential, Optimus Inu has created a market for all the dApps they have developed. Half the revenue will go back to our talented developers and half will be used for Optimus Inu marketing.

Staking

Decentralized staking dapps available on all EVM compatible chains. Variables (ie: APY, reward type, lock length) can all be set according to a project's needs.

Bridge

Decentralized bridge dapp available for Multi-chain projects to connect their tokens. Can support any EVM chain, multiple token links, and the fees can be adjusted to desired levels.

DEX

Add TVL to your project as investors pair liquidity on your own custom and project-branded decentralized exchange. Offer further benefits to holders via farming pools and also via trading fees coming from volume on the swap.

NFT

Comprehensive NFT offerings: art, minting dApp, TG bots, and detail-level dashboards, OPLAB has you covered. Can support any EVM chain and integrate with various secondary marketplaces.

Swap

A custom & project-branded web app where any trader can trade any EVM token. The custom swap can be upgraded with various fee-based perks, whitelisted tokens, and more.

Miner

The miner paradigm is based on the communal contribution and locking of value in a contract that then pays out all vested contributors. Flexible rates focusing on long-term earning potential in a beautiful and easy to use front end web app

The team is available through telegram, twitter or email to discuss business matters.
